

With so much choice, selecting the right duvet for your guests can be difficult. That is why we have put together this handy guide, so you can understand the benefits of each filling and then easily compare our products at a glance.

Choosing the right duvet for your guests

NATURAL FILL (FEATHER AND DOWN)

Natural fill is feather, down, or a combination of both. Down is not a feather, it is the fluffy insulation under the feathers that keeps ducks and geese warm and protected from outdoor elements. Natural fills are best for conforming to the body.

MULBERRY SILK

Mulberry Silk's long yarn gives it a fine drape and lighter loft. It is cool and hypo allergenic - the perfect natural choice for people with allergies. It is also extraordinarily durable.

MICROFIBRE

The finest, luxury synthetic alternative to feather and down. A supremely soft fibre that drapes excellently around the body and offers rich, soft, comfortable support.

ESTLON FIBRE

A great anti allergenic option, Estlon Fibre is treated with AEM 5700 antimicrobial agent which reduces fungal levels by up to 99.99% in comparison with untreated fibre.

TENCEL

Tencel is extracted from the raw material, wood. It naturally absorbs moisture and quickly releases it again. This property guarantees a pleasantly dry sleeping climate.

HOLLOWFIBRE

An excellent value, plump fibre filling that offers firm, lasting support for duvets.

POLYESTER FIBRE

This is a man-made fill. Synthetic duvets typically have a shorter life span and will not conform to the body as well as a natural fill duvet. Overall, the most affordable type of duvet.

SILICONISED BALL

This is a type of synthetic fill in which polyester clusters are coated with silicone to feel and move like down. It gives the softness and appeal of a true down duvet without the cost. Great for allergy sufferers who prefer a synthetic fill but want down-like comfort.

COVER

A higher thread count duvet cover will be softer, but more importantly, will keep the fill in and impurities out.
